## History of Beer

The history of beer dates back so far that its unknowns divide historians in two. Humans, who adopted a settled life and first started to plant wheat in the era when there was no writing, obtained their first agricultural food and beverages from wheat. The point where historians are divided is whether the first thing that human beings produced from grain was beer or bread.

The first known records of beer, which is estimated to date back much earlier, were found 6 thousand years ago in the Sumerians, a Mesopotamian civilization. In a relief from the Sumerian civilization, the stages of beer making are explained and it is shown that the drink was offered to the gods.

This drink, which became widespread through cultural interaction in later times, spread rapidly in all regions where grain was grown.

## The Story of Beer Glasses

The story of beer glasses dates back as far as itself. Tablets from the Sumerian civilization show many people drinking beer together from clay barrels.

Later, the spread of the drink and its use in different geographies also changed the way it was drunk. Climates and economic activities were decisive in the materials used for the glass, and it varied from culture to culture. Some civilizations made beer glasses from soil, some from animal bones, and some from minerals.

The use of glass as a material in beer glasses first occurred in the 18th century on the borders of Europe. The beer glass order given by English nobles to German glass masters led to the production of beer glasses from glass for the first time. Later, the use of glass in glasses became widespread, and beer glasses took on various forms according to needs. A form known as the “Coachman Beer Glass” was invented for carriage drivers, allowing them to drink beer easily while driving, and thick glass beer glasses called Krug were produced so that they would not break easily during fights.
